# US – Non GMO brands

## Non-GMO brands

From the fruit on the bottom to the granola on top, we're committing to offering Non-GMO Project Verified options among our flagship brands. We're also working with our farmer partners to remove GMOs from their cows' feed. It'll all happen over time, and the work continues. Dannon products that are Non-GMO Project Verified are now available. Danimals Smoothies, comprising a vast majority of the Danimals brand family, and most of the Dannon brand family are Non-GMO Project Verified, which means the products will be made with milk from cows fed non-GMO feed. The rest of the products from the Dannon brand family and our Oikos Triple Zero products will follow by the end of 2018. We continue to advance projects to transition additional products.

Now offering products that are Non-GMO Project Verified –  
with still more to come.

If it still has GMO ingredients,  
we let you know.  
We've labeled all of our  
products.
